Daily Number of People With Positive Results
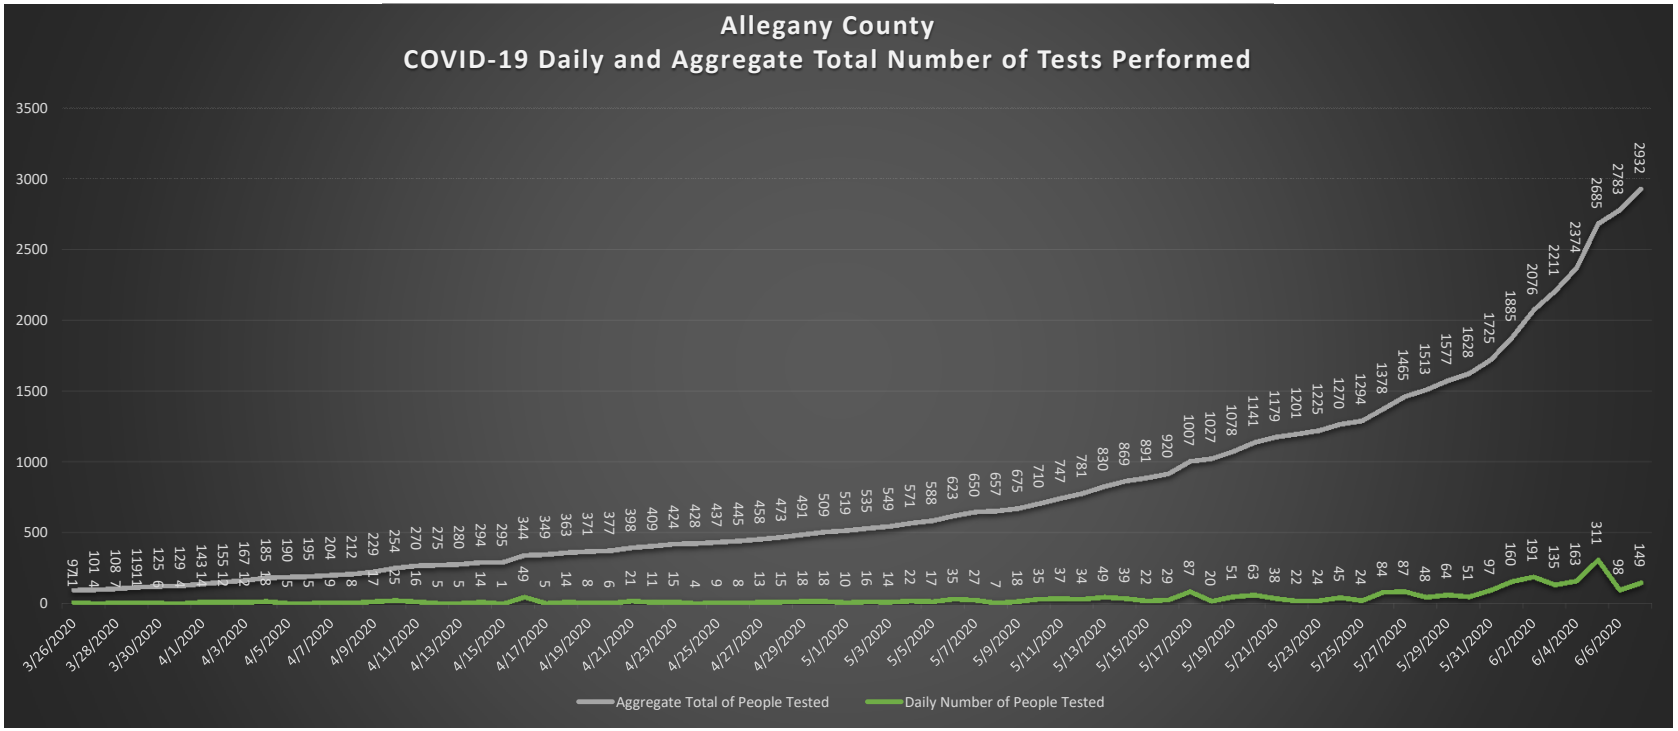
Daily Number of People Tested



Data Notes: The attached tables display the daily count of reported laboratory tests for COVID-19 in your jurisdiction with regional data included for comparison. Please note that these tables use ECLRS as the source data and the following caveats apply. Patients may have more than one test result for COVID-19 given testing of different specimen types, i.e., nasopharyngeal and oropharyngeal. The case counts in the attached table are based on de-duplicated records, i.e., are patient-based. Individuals are counted as positive if any one specimen type is positive. The tables are based on the county assigned at the time of report to ECLRS. For positives, the ECLRS report is matched against CDESS to improve county designation; however, since these reports are produced on a daily basis, it may not be possible to completely account for interjurisdictional changes in county of residence.
